

Subject index volume 34

- ADHD (attention deficit hyperactivity disorder),**
MBD (minimal brain dysfunction), clumsiness,
neurobehavioural disorders, pre- and perinatal
risk factors, attention, motor control, 169
- albumin, alpha-fetoprotein, pregnancy, 209**
- alpha-fetoprotein, albumin, pregnancy, 209**
- arm movements, neural network, motor control,**
development, model, 101
- attention, MBD (minimal brain dysfunction),**
ADHD (attention deficit hyperactivity dis-
order), clumsiness, neurobehavioural dis-
orders, pre- and perinatal risk factors, motor
control, 169
- attention, minor neurological dysfunction, infor-**
mation processing, event related potentials,
P300, 69
- Bayley scales, preterm infants, corrected age,**
developmental indexes, 113
- behavioural problems, minor neurological**
dysfunction, puberty, learning difficulties,
gonadal hormones, 59
- body fluid homeostasis, neonate, hormonal regu-**
lation, renal function, 179
- bradycardia, preterm infant, cerebral blood flow,**
brain oxygenation, 119
- brain lesions, systemic disease, general move-**
ments, quality, 39
- brain oxygenation, preterm infant, cerebral blood**
flow, bradycardia, 119
- cerebellum, compensation, lesions, remodelling,**
clinical relevance, 79
- cerebral blood flow, preterm infant, bradycardia,**
brain oxygenation, 119
- cerebral blood flow, splanchnic circulation, renal**
artery, Doppler ultrasound, 227
- cerebral palsy, optimality, newborn, risk factor,**
screening, 133
- clinical relevance, compensation, cerebellum,**
lesions, remodelling, 79
- clumsiness, MBD (minimal brain dysfunction),**
ADHD (attention deficit hyperactivity dis-
- order), neurobehavioural disorders, pre- and
perinatal risk factors, attention, motor control,
169
- compensation, cerebellum, lesions, remodelling,**
clinical relevance, 79
- corrected age, preterm infants, developmental**
indexes, Bayley scales, 113
- dendritic bundles, development, locomotion,**
kinematic analysis, muscle activity, rat, 89
- development, locomotion, kinematic analysis,**
dendritic bundles, muscle activity, rat, 89
- development, magnetic resonance imaging (MRI),**
preterm infant, fullterm infant, myelination,
155
- development, neural network, motor control, arm**
movements, model, 101
- developmental indexes, preterm infants, corrected**
age, Bayley scales, 113
- developmental neurology, variability, infancy,**
toddlers, 1
- developmental psychopathology, symptomatic ex-**
pression of structural lesions, learning
disabilities and behavioural problems,
vulnerability for schizophrenia, 163
- Doppler measurements, fetus, heart rate control,**
217
- Doppler ultrasound, cerebral blood flow, splan-**
chnic circulation, renal artery, 227
- early detection, quality of motor patterns,**
neurological development, transformation of
neural functions, toddlers, 47
- EMG, spontaneous general movements, preterm**
infants, movement quality, 29
- event related potentials, minor neurological**
dysfunction, information processing, atten-
tion, P300, 69
- fetal behavioural states, fetal heart rate variation,**
Sonicaid System 8000, 21
- fetal circulation, neonatal circulation, pulmonary**
artery, pulmonary vein, lung volume, 191

- fetal heart rate variation**, fetal behavioural states, Sonicaid System 8000, 21
- fetal movements**, movement quality, intrauterine growth retardation, neurological condition, oligohydramnios, premature rupture of the amniotic membranes, 13
- fetus**, heart rate control, Doppler measurements, 217
- fullterm infant**, magnetic resonance imaging (MRI), preterm infant, myelination, development, 155
- general movements**, brain lesions, systemic disease, quality, 39
- gonadal hormones**, minor neurological dysfunction, puberty, behavioural problems, learning difficulties, 59
- heart rate control**, fetus, Doppler measurements, 217
- hormonal regulation**, neonate, body fluid homeostasis, renal function, 179
- infancy**, variability, toddlers, developmental neurology, 1
- infants at no risk**, transitory neurological findings, neurology in early infancy, infants at risk, sensory-motor transformation, 143
- infants at risk**, transitory neurological findings, neurology in early infancy, infants at no risk, sensory-motor transformation, 143
- infection**, SIDS, neural transformations, sleeping position, 125
- information processing**, minor neurological dysfunction, attention, event related potentials, P300, 69
- intrauterine growth retardation**, fetal movements, movement quality, neurological condition, oligohydramnios, premature rupture of the amniotic membranes, 13
- kinematic analysis**, development, locomotion, dendritic bundles, muscle activity, rat, 89
- learning difficulties**, minor neurological dysfunction, puberty, behavioural problems, gonadal hormones, 59
- learning disabilities and behavioural problems**, developmental psychopathology, symptomatic expression of structural lesions, vulnerability for schizophrenia, 163
- lesions**, compensation, cerebellum, remodelling, clinical relevance, 79
- locomotion**, development, kinematic analysis, dendritic bundles, muscle activity, rat, 89
- locomotion**, rat, electromyography, immobilization, development, 89
- lung volume**, fetal circulation, neonatal circulation, pulmonary artery, pulmonary vein, 191
- magnetic resonance imaging (MRI)**, preterm infant, fullterm infant, myelination, development, 155
- MBD (minimal brain dysfunction)**, ADHD (attention deficit hyperactivity disorder), clumsiness, neurobehavioural disorders, pre- and perinatal risk factors, attention, motor control, 169
- minor neurological dysfunction**, information processing, attention, event related potentials, P300, 69
- minor neurological dysfunction**, puberty, behavioural problems, learning difficulties, gonadal hormones, 59
- model**, neural network, motor control, development, arm movements, 101
- motor control**, MBD (minimal brain dysfunction), ADHD (attention deficit hyperactivity disorder), clumsiness, neurobehavioural disorders, pre- and perinatal risk factors, attention, 169
- motor control**, neural network, development, arm movements, model, 101
- movement quality**, fetal movements, intrauterine growth retardation, neurological condition, oligohydramnios, premature rupture of the amniotic membranes, 13
- movement quality**, spontaneous general movements, preterm infants, EMG, 29
- muscle activity**, development, locomotion, kinematic analysis, dendritic bundles, rat, 89
- myelination**, magnetic resonance imaging (MRI), preterm infant, fullterm infant, development, 155
- neonatal circulation**, fetal circulation, pulmonary artery, pulmonary vein, lung volume, 191
- neonate**, body fluid homeostasis, hormonal regulation, renal function, 179
- neural network**, motor control, development, arm movements, model, 101
- neural transformations**, SIDS, infection, sleeping position, 125
- neurobehavioural disorders**, MBD (minimal brain dysfunction), ADHD (attention deficit hyperactivity disorder), clumsiness, pre- and perinatal risk factors, attention, motor control, 169

- neurological condition**, fetal movements, movement quality, intrauterine growth retardation, oligohydramnios, premature rupture of the amniotic membranes, 13
- neurological development**, quality of motor patterns, transformation of neural functions, toddlers, early detection, 47
- neurology in early infancy**, transitory neurological findings, infants at risk, infants at no risk, sensory-motor transformation, 143
- newborn**, optimality, risk factor, cerebral palsy, screening, 133
- oligohydramnios**, fetal movements, movement quality, intrauterine growth retardation, neurological condition, premature rupture of the amniotic membranes, 13
- optimality**, newborn, risk factor, cerebral palsy, screening, 133
- P300**, minor neurological dysfunction, information processing, attention, event related potentials, 69
- pre- and perinatal risk factors**, MBD (minimal brain dysfunction), ADHD (attention deficit hyperactivity disorder), clumsiness, neuro-behavioural disorders, attention, motor control, 169
- pregnancy**, albumin, alpha-fetoprotein, 209
- premature rupture of the amniotic membranes**, fetal movements, movement quality, intrauterine growth retardation, neurological condition, oligohydramnios, 13
- preterm infant**, cerebral blood flow, bradycardia, brain oxygenation, 119
- preterm infant**, magnetic resonance imaging (MRI), fullterm infant, myelination, development, 155
- preterm infants**, corrected age, developmental indexes, Bayley scales, 113
- preterm infants**, spontaneous general movements, movement quality, EMG, 29
- puberty**, minor neurological dysfunction, behavioural problems, learning difficulties, gonadal hormones, 59
- pulmonary artery**, fetal circulation, neonatal circulation, pulmonary vein, lung volume, 191
- pulmonary vein**, fetal circulation, neonatal circulation, pulmonary artery, lung volume, 191
- quality**, brain lesions, systemic disease, general movements, 39
- quality of motor patterns**, neurological development, transformation of neural functions, toddlers, early detection, 47
- rat**, locomotion, kinematic analysis, dendritic bundles, muscle activity, development, 89
- remodelling**, compensation, cerebellum, lesions, clinical relevance, 79
- renal artery**, cerebral blood flow, splanchnic circulation, Doppler ultrasound, 227
- renal function**, neonate, body fluid homeostasis, hormonal regulation, 179
- risk factor**, optimality, newborn, cerebral palsy, screening, 133
- screening**, optimality, newborn, risk factor, cerebral palsy, 133
- sensory-motor transformation**, transitory neurological findings, neurology in early infancy, infants at risk, infants at no risk, 143
- SIDS**, neural transformations, infection, sleeping position, 125
- sleeping position**, SIDS, neural transformations, infection, 125
- Sonicaid System 8000**, fetal behavioural states, fetal heart rate variation, 21
- splanchnic circulation**, cerebral blood flow, renal artery, Doppler ultrasound, 227
- spontaneous general movements**, preterm infants, movement quality, EMG, 29
- symptomatic expression of structural lesions**, developmental psychopathology, learning disabilities and behavioural problems, vulnerability for schizophrenia, 163
- systemic disease**, brain lesions, general movements, quality, 39
- toddlers**, quality of motor patterns, neurological development, transformation of neural functions, early detection, 47
- toddlers**, variability, infancy, developmental neurology, 1
- transformation of neural functions**, quality of motor patterns, neurological development, toddlers, early detection, 47
- transitory neurological findings**, neurology in early infancy, infants at risk, infants at no risk, sensory-motor transformation, 143
- variability**, infancy, toddlers, developmental neurology, 1
- vulnerability for schizophrenia**, developmental psychopathology, symptomatic expression of structural lesions, learning disabilities and behavioural problems, 163
